

INTERTEK INLIGHT

GLOBAL INSIGHT. LOCAL EXPERTISE.

Intertek Inlight is a supply chain management solution designed to provide the traceability and transparency necessary for informed global businesses.

It enhances visibility into your supply chain, which helps to manage risk and provide more insight into your suppliers.

Your Challenges

As global supply chains become increasingly complex networks for intermediaries, subcontractors, domestic importers and wholesalers, many companies are left without a clear view of their existing supplier partners. In some instances, companies lack credible and verified information for up to 80 percent of their direct suppliers, resulting in insufficient knowledge about where their products and services come from. This exposes all parties involved to risk in their daily business transactions.

Our Solutions

The Intertek Inlight platform, enabled by Intertek, was developed to help both buyers and suppliers maximize visibility into the supply chain. This is achieved by leveraging Intertek's considerable experience in supplier inspections and audits: Each year Intertek conducts 2 million facility visits, comprising 200,000 suppliers on behalf of 5,000 global buyers.

The Intertek Inlight platform helps protect brand reputation, mitigate supply chain risk through better visibility and decision making, and reduce supplier management costs associated with qualifying and on-boarding

new suppliers. At the core of Intertek Inlight are the following steps:

- Collection, cleansing and mapping of supplier information
- Inherent Risk Screening
- Supplier Risk Assessment profiling
- Risk-based analysis
- Desktop Verification services
- Corrective Action Plan Management
- Business Intelligence: Executive Reporting and Analysis
- Supplier improvement through Intertek's ATIC services and capacity building
- Outsourcing Support: make use of Intertek's vast compliance outsourcing team to help your team manage the program

This provides necessary insight into the identity and number of your direct and indirect suppliers, including supplier product, country, private label and reputational risk issues, supplier adherence to your corporate values, the types and location of issues in your supply chain and improvements you can make to your supply chain.

The powerful Intertek Inlight solution consists of verified supplier data presented in the form

of structured profiles relating to a variety of industry topics such as and including financial information, company profile, product quality and safety, security, sustainability and social responsibility allowing companies to evaluate supplier performance in these areas.

The verified supplier profiles provide complete and up-to-date intelligence by incorporating supplier input as well as independent third-party verification.
