

Intertek Qualified Personnel (IQP) Program

Trusted inspectors. More efficient AHJs.

Intertek

Valued Quality. Delivered.

Intertek's Qualified Personnel (IQP) Program brings peace of mind to AHJs by independently qualifying personnel to ensure that their inspections or installations meet industry and/or association requirements.

We also partner with leading industry organizations to extend their personnel qualification programs to Intertek's high standards to increase efficiency and effectiveness for AHJs.

These efforts are managed through direct relationships to various organizations, industry participation, and strategic alliances with inspection experts.

Our IQP Program members receive the job training necessary to be successful in their field, and then elect to take it one step further by coming to Intertek for qualification to hold themselves to a higher standard. We implement a system of checks and balances, including audits and continued education, to ensure our program members are elite members of their industry, as they are representing Intertek.

Get More with Intertek IQPs

Intertek is an NRTL that operates in more than 100 countries with over 35,000 employees. We are a trusted, unbiased 3rd-party that holds program members to higher standards and provides traceable verification of inspections and installations.

What separates IQP installers and inspectors from the rest?

There are many inspectors and installers in the field today, but an AHJ needs to have confidence in the work they perform. Those that join Intertek's IQP Program are showing their commitment to being part of an elite group of people in their industry and take pride in the quality of their work. They elect to go above and beyond industry requirements by choosing to participate in our program with more stringent checks and balances.

What additional steps do IQP Program members have to take?

Because Intertek holds IQP Program members to a higher standard, we perform regular 3rd party auditing per their program's requirements. Members are also required to maintain a certain level of education to ensure they maintain the highest level of knowledge of code and inspection/installation requirements. We either facilitate or partner with industry organizations that are able to meet the strict quality standards that we demand in our program.

Intertek

The Trust is in the Mark

The IQP Mark represents a commitment to a quality inspection or installation that can be trusted. The mark gives instant recognition and assurance to AHJs, allowing for quicker inspections and peace of mind.

How do IQPs increase efficiencies for AHJs?

Intertek stands behind the work of our IQP Program members, and you can too. We uphold the highest standards in both our testing methods and our business practices. Recognizing that the work was completed by an IQP should allow for a more streamlined inspection. An AHJ can trust the work performed and choose to defer all or some of the inspection knowing that a qualified inspector or installer, backed by Intertek, has completed the work.

Who are IQP Participants?

• Fire and Egress Door Inspectors

Working in partnership with the Door and Hardware Institute (DHI), Intertek has developed a comprehensive training and certification program for individuals performing inspections of swinging fire and egress doors with builders hardware. After passing DHI's Fire and Egress Door Assembly Inspection (FDAI) program, an inspector is then eligible to take additional steps and become qualified through Intertek.

• Perfect Raceway Installers

All certified raceway installers must go through a hands-on training course. The course includes training on code and fire door assembly components, the usage of approved drilling tools, and navigation of Intertek's SpecDirect™ database.

• Certified Hardware Installers

Working in partnership with ASSA ABLOY, Intertek qualifies installers to retrofit existing Warnock Hersey certified fire doors with enhanced features on ASSA ABLOY access controls and electrified hardware while still remaining compliant with NFPA 80 and continuing to function as designed.
