

Are your plumbing products in compliance?

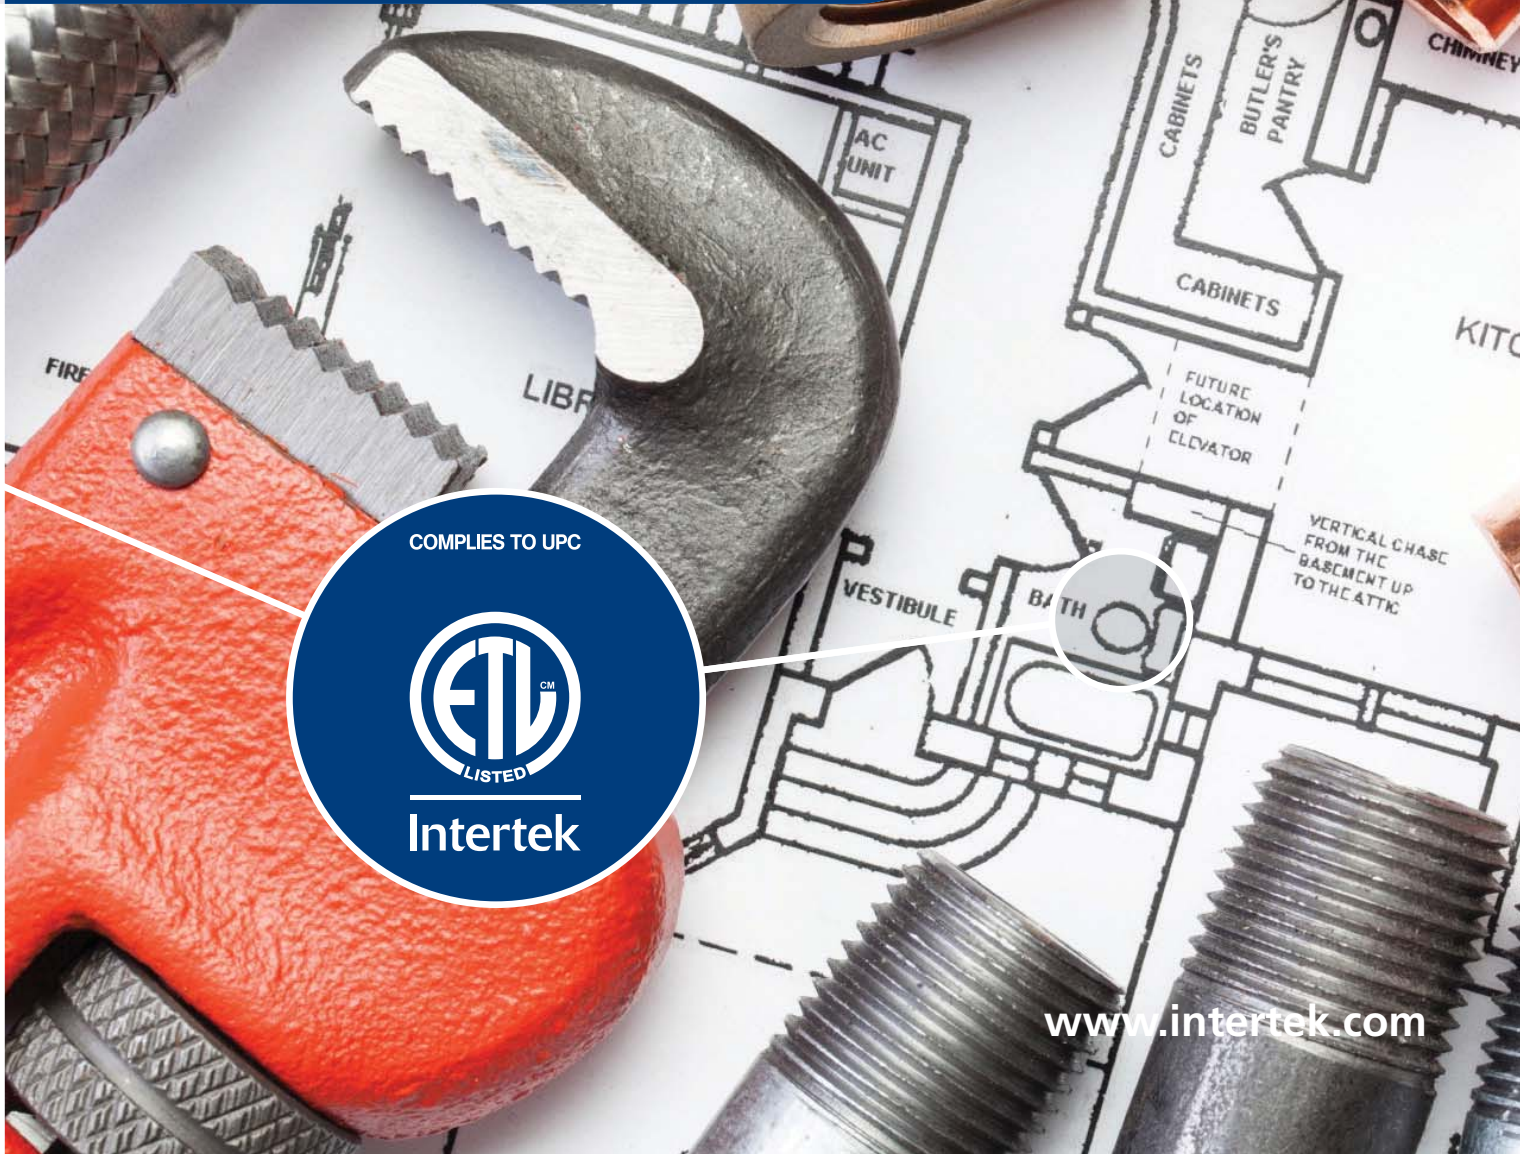

When it comes to your plumbing testing and certification needs, Intertek understands the challenges you face. It is essential to keep costs minimal, access markets quickly, and receive support along the way.

Intertek is more than a testing laboratory - we are a test partner, guiding our clients through all stages of the product development process to help identify all regulatory certifications needed for virtually any environment.

Valued Quality. Delivered.

Quality, Safety and Performance

Your Testing & Certification Partner for Plumbing Products

With plumbing laboratories in North America and China, combined with over 20 years of experience, Intertek is your complete plumbing testing and certification partner. We can evaluate your plumbing products to a variety of performance and health requirements in accordance with ANSI, ASME, ASTM, CSA, IAPMO, NSF, and UL standards, as well as applicable European Union requirements.

Product Expertise

Throughout our network of accredited labs, we provide testing and certification services for a wide range of plumbing products, including:

- Pipes (sewer and pressure pipes and fittings)
- Fixtures: bathtubs, showers, lavatories, sinks, water closets
- Fittings: faucets, hand showers, thermostatic and pressure balance, automatic compensating valves, diverters
- Waste fittings and drains

Intertek is pleased to offer our ETL-LISTED mark as a new choice for compliance with the Uniform Plumbing Code™ (UPC). Intertek continues to be a recognized testing lab for IAPMO (International Association of Plumbing and Mechanical Officials). Through an agreement between Intertek and IAPMO, customers can gain access to the traditional IAPMO (UPC) certification mark. However, customers now have the choice to have their plumbing products labelled as ETL-LISTED – using one of North America's dominant certification marks. We are pleased to offer this fast, cost-effective solution to improve speed to market.

Testing Capabilities

Intertek can perform a wide range of plumbing product tests. The most common are: Physical, Chemical, Corrosion and Toxicity. In addition, with new changes to both the USA and Canadian plumbing codes, there is an increasing need to have plumbing components tested for low lead level compliance. Intertek can help by providing testing to NSF 372 (< 0.25% lead content) as well as NSF 61.

Our expertise is backed by a wealth of accreditations including:

- American National Standards Institute (ANSI)
- International Approvals Services (IAS)
- Standards Council of Canada (SCC)

About Intertek

As a leading provider of testing, inspection and certification services to many of the world's leading brands and companies, Intertek is your partner in a changing world. We add value for customers by helping improve the quality and safety of your products, assets and processes. With 25 locations across Canada and a global network of over 36,000 employees in over 1,000 laboratories and offices, Intertek has the technical expertise and experience to help our customers meet end-user expectations for safety, sustainability, performance, integrity and desirability for virtually any market worldwide.
