Valued Quality. Delivered.

Potable Water Testing

ShipCare: Helping to Protect Potable Water Quality on Ships

Maritime Labour Convention guidelines require seafarers have access to good quality potable water, including water used for drinking, food preparation, and other uses. Regulated, hygienic, potable water conditions are required in order to protect a vessel's crew, passengers and visitors.

Intertek ShipCare supports ship owners and operators with convenient potable water testing, helping to ensure water quality standards are met.

Potable Water Testing

Maritime Potable Water Quality Testing:

Each flag state lays down minimum requirements to ensure that drinking water of appropriate quality is made available. Requirements vary however and meeting the criteria laid down by a particular flag state might not be enough to ensure high levels of water quality.

Intertek's expertise in potable water analysis helps clients monitor the water quality on their ships, helping them maintain higher quality levels and reducing the risk of infection or illness.

Intertek ShipCare's laboratory analysis services are designed to satisfy the requirements of the World Health Organisation (WHO), the International Labour Organisation, and the Maritime Labour Convention. ShipCare potable water testing helps to ensure professional standards for testing, using both microbiological and chemical analysis.

Recreational Water Analysis:

ShipCare offers a suite of tests designed purely for the analysis of recreational water, such as found in swimming pools and hot tubs. For owners and operators of cruise ships, recreational water testing provides additional peace of mind, helping ensure reasonable care for their passengers and crew.

On-board test kits are a useful tool for allowing ship staff to monitor day-to-day changes in the quality of recreational water. Intertek ShipCare is able to offer a range of kits suitable for on-board use to complement laboratory analysis.
