China PETROLEUM SUMMIT CONFERENCE

2011中国国际油气资源开发与贸易高峰论坛

October 20, 2011
Regent Hotel, Beijing, China

Gain competitive insight on the growing Chinese Petroleum and LNG Markets

The China Petroleum and Chemical Industry Federation Fall Petroleum Industry Meeting (CPCIF) Summit offers a rare opportunity for foreign petroleum and LNG related companies to gain insight into the China market and network with key representatives of China's oil & gas and refining industries.

China has become one of the largest global consumers of oil-related products. Where China goes, the world's oil market will go with it. China imported a record breaking 2.54 million tons of crude oil in 2010, making the nation 55% dependent upon imported crude oil. An increasing number of petroleum refineries in China are depending upon imported crude oil.

The Chinese Petroleum and energy market is dynamic, with changes in global oil supply, crude oil selection and geopolitics affecting where China obtains crude oil. China seeks to minimize oil price risk and ensure reliable sources of imported oil supply.

To help understand and address these challenges, the CPCIF is holding the 2011 Petroleum Summit Conference around the theme "The Status of China Oil & Gas Markets and Trade, and the Impact of Global Developments in China's Crude Oil, Refining and LNG Markets", as attendees discuss and review the latest developments and trends, while seeking the opportunities to win in the market.
