

China RoHS Services

The Challenge

China RoHS (formally known as Administration Measure on the Control of Pollution Caused by Electronic Information Products) is a Chinese government regulation that controls the legal threshold of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDs) in electrical and electronic products.

Manufacturers, importers, and distributors must ensure that these products meet these limits and the Declaration and Labelling Requirements of China RoHS in order to continue selling products into China.

How does your company plan to comply?

The Solution

Intertek has the experience and expertise to provide the guidance and services necessary to address the unique challenges and requirements of China RoHS.

Intertek's China RoHS services include:

- **Product Assessment**
Determine if the product is within legislative scope of China RoHS and develop a product labelling assessment report
- **Product Testing**
Chemical and/or XRF testing to determine that the China RoHS restricted substances limits are met
- **Marketing, Labels, and Tables**
Preparation of China RoHS labels, markings, and "Table of Toxic Materials and Hazardous Substances" in the appropriate Chinese language with set graphical standards if a product contains a restricted substance
- **Consulting Support**
Monthly calls, Q&A, legislative updates, and corporate training
