

Food Testing Services

Your Challenges

From farm to fork, the entire food marketplace has evolved into a diverse network of multiple channels. More often we find the core operational structure, as well as various business processes involved in food production and distribution, fail to communicate and align with one another.

If preventative and safety control actions such as food testing are not understood, implemented, and embraced by all parties involved, not only is the quality of the food produced at risk, but also the reputation and brand value of the company behind it.

Our Solutions

Testing is an essential part of all food businesses and retailers alike in order to guarantee food safety as well as quality and content.

Through its global network, Intertek is able to test your products or your suppliers' products against all standards such as: ISO, national standards, even clients' standards.

Our testing includes:

- **Microbiological:** to detect pathogens.
- **Physico-chemical:** to determine nutritional value, GMO, pesticides, antibiotics, contaminants, etc.
- **Sensory Testing:** to compare a product to the competition and/or evaluate the product by a consumer panel.

Testing can occur at any step of the production process from:

- **Pre-production testing:** where you can validate that the product fulfills your requirements as well as legislations' requirements.
- **Testing after production is completed:** where you can check that all critical parameters for export and sale are met.

Samples drawing can also be provided by our inspectors network.

At Intertek, it is our sole mission to provide not only the one-stop-shop you seek for all food services, but also establish a trusted partnership with your business - consistently adding value and increasing your competitive advantage in the industry with every step we take together.
