

Verification Services: production services

Checking the production process when you can't

“ Specifically developed for those clients who need eyes and ears on the shop floor. ”

Intertek International is a world-renowned inspections and testing company offering a wide range of tailor-made Verification and Advisory Services. With our global network and expertise we can give you the assurance you need, no matter where you are located or where you are doing business. Intertek are your international quality control team.

Our range of production services have been specifically developed for those clients who need eyes and ears on the shop floor to ensure they receive exactly the goods they ordered.

Intertek's range of services include:

IPC (Initial Production Checks)

Intertek will inspect raw materials and components before production begins. After product samples are provided, we will verify that the factory has ordered the correct materials, components and accessories. We will also randomly select and inspect a sample of partially produced products for potential defects, then report our findings to you. If necessary, we can provide the factory with the technical advice necessary to improve product quality and to minimise the chance of defects during production.

DUPRO (During Production Checks)

During Production Checks are ideal for shipments of substantial quantities, product lines with continuous production, strict requirements for on-time shipments, and as a follow-up if poor results were found during Pre-Production Inspection.

Normally, During Production Checks are carried out when 10-15% of the merchandise has been completed. Intertek will inspect the production batch and examine products in the line for possible defects.

At this point we will identify deviations, if any, and offer advice on corrective measures that will ensure uniformity of product and quality. We will also re-check any defects discovered during Pre-Production Inspection and confirm that they have been rectified.

FRI (Final Random Inspections)

Final Random Inspections can begin only after production has been completed and all merchandise is ready and packed for shipment. Using a statistical method set by industry standards, we will sample products to verify product safety, quantity, workmanship, function, colour, size, packing and more. This ensures that your product is consistent and compliant with all country, industry, or otherwise-specified requirements and that no critical major or minor defects appear.

At each stage of the production cycle our Intertek inspector will produce a full and detailed inspection report, together with a photographic record allowing you to see the work undertaken.

Commercial Manufacturing Expediting Services

These services will assure you that milestones, timing of production, planning and work related procedures are being met within the agreed terms of the work schedules. They will also inform you or the end receiver of any deviations in order to correct the non-conformity.
