

Chemical Management Auditing

Valued Quality. Delivered.

The Challenge

As awareness of the adverse, long-term environmental effects of chemicals grows, it is imperative that facilities have a validated process in place to not only manage, but also reduce, the hazardous chemicals used in the manufacturing of products.

Do you have an effective approach to verify the safe handling and proper disposal of chemicals in your supply chain?

The Solution

Intertek's Chemical Management Audit solution can help ensure chemical management across your supply chain. The process starts with an application of chemical expertise to provide a facility baseline risk indicator, from which auditing of your facility can be efficiently planned.

Intertek's web-based platform and software helps ensure our Chemical Management Audit approach is the ideal tool for evaluating, tracking and monitoring chemical management performance in factories, ultimately assuring overall performance improvements.

Intertek's Chemical Management Audit solution includes guidance for:

Benefits to Intertek's Chemical Management Audit solution are:

- **Increased visibility deep into the supply chain**
- **Benchmarked results with global visibility**
- **Management transparency to enable targeted efforts**
- **Consistent messaging across the supply chain**
- **Identification of process efficiency and cost savings**
- **Assist with green product design and certification**
- **Protect reputational risk, people and environment**

Upon satisfactory completion of the chemical management assessment and performance criteria, the manufacturer will receive an Achievement Award acknowledging the facility's level of adherence to program standards.
