

Global Security Verification (GSV)

Your Challenges

Since the events of September 11, 2001, international governments and customs organizations have implemented supply chain security standards to secure trade, protect against terrorist weapons and to combat illegal trafficking. The enhanced supply chain security standards and criteria, including C-TPAT, PIP and AEO, have been embraced and implemented by the global trade community. As part of enforcing and adhering to the international supply chain security standards, companies must assess their supply chain to identify, mitigate and eliminate potential security risks.

Our Solutions

Intertek's approach – Global Security Verification (GSV)

Intertek's GSV program employs a cutting-edge methodology for promoting best practices throughout the global trade industry, enabling importers and suppliers to mitigate risks associated with the cross-border transport of goods, while simultaneously expediting their arrival at destination markets. Best practices are achieved through the effective utilization of resources, structured processes and innovation.

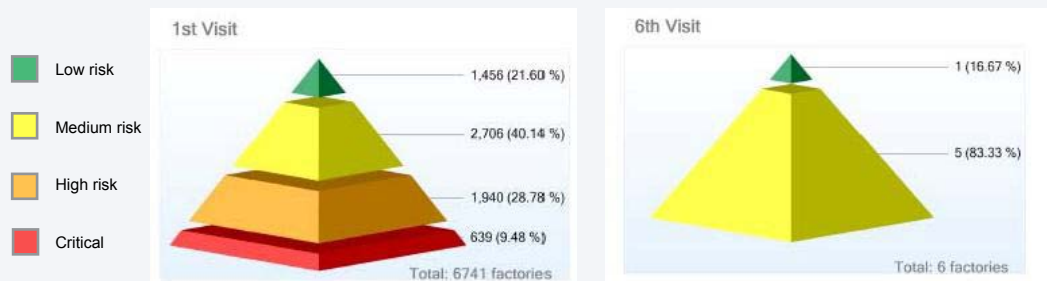

Intertek's GSV program integrates multiple global supply chain security initiatives, including C-TPAT, PIP and AEO. Our mission is to partner with international suppliers and importers to drive the development of a global security verification process, resulting in increased safety assurance, risk control, efficiency and cost savings for all participants.

GSV Business Benefits Include:

- Enables importers and suppliers to leverage efforts through a common industry platform and collaboration
- Delivers effective data gathering, analysis and reporting capabilities that allow for risk mitigation and more informed decision making for all supply chain partners
- Reduces audit fatigue by enabling suppliers to share their verification reports with various importers, allowing them to prioritize resources towards learning and continuous improvement versus repeat auditing
- Employs a consistent scoring methodology across all players that is combined with the use of automated auditor tools to provide increased audit efficiency, consistency and better reporting capabilities

Enhancing the development and implementation of your global supply chain security.

** Progression of GSV and its impact at reducing risk from the first visit to the sixth visit.*
